

The power of probiotics.

Probiotics play a major role in keeping intestines clean, combating Candida yeast infections, building the immune system, and supplying essential nutrients to form superior quality blood. Taking probiotics is especially essential after antibiotic treatment, as they replenish the important intestinal flora destroyed by antibiotics.

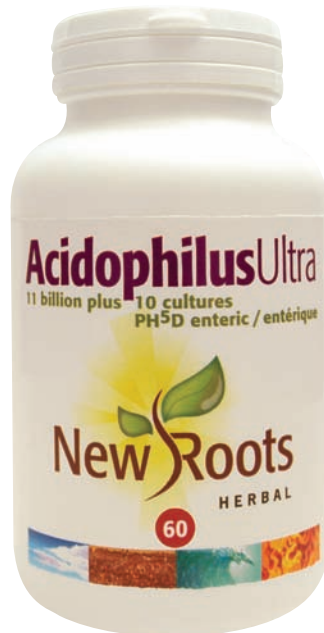

ONE CAPSULE OF ACIDOPHILUS ULTRA SURPASSES THE EFFECTIVENESS OF 110 SERVINGS OF A REGULAR 10 BILLION STRENGTH PROBIOTIC CAPSULE.

ACIDOPHILUS ULTRA's 10 complementary probiotics all work at different sites along the intestines for greater health benefits:

- Prevention of many serious diseases
- Better use of protein, fat, minerals and vitamins
- Improves digestibility, absorption, and solubilization
- Enhances action of pepsin (for people suffering from hypochlorhydria)
- Improves bowel movement
- Synthesizes vitamins
- Removes free radicals
- Increases beta-galactosidase activity and lactose fermentation
- Balances intestinal functions
- Promotes growth and health by creating a more efficient use of the bioavailability of nutrients
- Improves lactose tolerance

Ingredients
Each PH⁵D enteric coated vegetable capsule contains:

L. Bifidus.....	4.4 billion
L. Acidophilus.....	3.905 billion
L. Helveticus (8781)	550 million
L. Plantarum	440 million
L. Casei.....	440 million
Bifido Longum.....	330 million
Bifido Infantis	330 million
Bifido Breve	330 million
S. Thermophilus.....	220 million
L. Bulgaricus	55 million
F.O.S. (Fructo-oligosaccharides)	10 mg
A.O.S. (Arabino-oligosaccharides)	10 mg

Prevent disease with Probiotics.

ACIDOPHILUS ULTRA DELIVERS THE MOST ADVANCED PROBIOTIC FORMULA IN EUROPE, ASIA AND NORTH AMERICA.

ACIDOPHILUS ULTRA is a unique formulation of 10 scientifically proven, complementary probiotic cultures. ACIDOPHILUS ULTRA cleans, protects, aids in protein digestion, stimulates the immune system and completely replenishes your gastrointestinal system. ACIDOPHILUS ULTRA's special PH⁵D enteric-coated capsules bypass stomach acids and deliver 11 billion live cells to your intestines.

ACIDOPHILUS ULTRA and your well-being.

ACIDOPHILUS ULTRA helps eliminate an incredible number of conditions. These include gas, bloating, constipation, diarrhea, bad breath, dull complexion, excessive body odour, vaginal infections, deficiency in Complex-B vitamins, lack of energy, red eyes, and many other chronic disorders. ACIDOPHILUS ULTRA also protects against and fights the deadly hospital bacteria *C. difficile*.

Probiotics are scientifically proven to:

- Prevent many serious diseases
- Lower serum cholesterol
- Suppress bacteria and viruses
- Dissolve bile salts
- Control the production of dangerous genes from the enzymes of intestinal putrefactive bacteria
- Build your immune defenses

F.O.S. (fructo-oligosaccharides)

Increases the bifido probiotics population in the colon, which in turn contributes to human health in many ways. New Roots Herbal's F.O.S. is of the highest quality 100% inulin, extracted from chicory root.

F.O.S. helps to:

- Proliferate Bifido probiotics and reduce detrimental bacteria
- Reduce toxic metabolites and detrimental enzymes
- Prevent pathogenic and autogenous diarrhea
- Prevent constipation
- Protect liver function
- Produce nutrients

A.O.S. (arabinogalactan-oligosaccharides)

Arabinogalactan-oligosaccharides have also shown prebiotic effects, i.e. they selectively stimulate the growth and/or activity of probiotics in the colon and thus improve the intestinal microbial balance and further the body's health.

Bifido Longum, Bifido Infantis and Bifido Breve

These probiotics reside in the mucosal lining of the last part of the small intestine and are the predominant strains found to colonize the large intestine to support intestinal health, cleanliness and functionality. Three of the most predominant strains of the Bifido probiotics family, Bifido Longum, Bifido Infantis and Bifido Breve lower serum cholesterol and dissolve bile salts. They also help in maintaining a normal and balanced intestinal flora, particularly among children and elderly.

The Bifido probiotics family performs several important functions in the intestinal tract including the production of lactic and acetic acids which increase the acidity of the intestines. They help in the controlling and limiting of coliforms and clostridia. They also improve people's tolerance to lactose. They lower intestinal pH from 7-8 to 5-6 and prevent toxic amines. A healthy intestinal tract relies on sufficient quantities of these health-promoting friendly probiotics.

L. Acidophilus (Rhamnosus A)

Has the property to stick to the intestinal mucosa and to colonize the intestinal tract, protecting it from the harmful activities of bad microorganisms. It also protects the body from bacteria and viruses. It helps healing vaginal infections. It decreases the production of toxins by controlling putrefactive microbes contained in your body.

L. Helveticus (8781)

Used to reduce lactose intolerance and diarrhea, control unwanted micro-organisms and intestinal bacteria, and limit the proliferation of *Candida albicans*.

L. Bulgaricus

Improves immunity, digestion and lactose tolerance, reduces cholesterol and helps in controlling intestinal infections. It can also be found in cheese and yogurt.

L. Casei

Used to treat intestinal infections, it acts by improving your immunity against bacterial and viral infections.

L. Plantarum

Works against unwanted bacteria, specifically on Irritable Bowel Disease (IBD) and mostly on Ulcerative Colitis.

L. Bifidus (Rhamnosus B)

Provides immune response against pathogenic bacteria and viruses, helps in controlling vaginal infections and protects the digestive tract. It also controls the production of toxins in the body, prevents diseases that are caused by intestinal infections, and controls lactose intolerance and constipation. *L. Bifidus* increases immunity and the resistance to microbial and viral infections.

S. Thermophilus

Even though the *S. Thermophilus* does not colonize in the intestine, its enzyme, lactase, transforms lactose into lactic acid, which in turn, helps control harmful bacteria. It can also produce natural antibiotic-like substances and reduces lactose intolerance.

Each probiotic strain has individual characteristics: behaviour in the presence of oxygen, the ability to ferment carbohydrates or to the resistance to acidity and bile. They all have a specific action within the intestine. All probiotics differ in health benefits, in terms of which intestinal pathogens they can inhibit or their ability to modulate the immune system. Thus, the 10 different strains of *Acidophilus Ultra* will act accordingly to provide you with the best intestinal hygiene and an optimisation of probiotic health effects.

Suggested Use

Take 1 to 2 capsules daily with water.

Note

Keep Refrigerated.

Potential Potency

Non-enteric coated products have 99% of their product destroyed by stomach acids in 30 minutes. *ACIDOPHILUS ULTRA PH⁵D* enteric coated capsules have 100 times the strength advantage of conventional capsules, tablets and yogurts to deliver a full 11 billion beneficial cells to the small intestine.

One 11 billion PH⁵D enteric coated capsule surpasses the effectiveness of:

- 1 sachet of a 100 billion probiotic*
- 31 capsules of a 35 billion probiotic*
- 110 capsules of a 10 billion probiotic*
- 91 capsules of a 12 billion probiotic*
- 22 servings of a 50 billion yogurt*

*Not PH⁵D enteric coated
